

# PEMROGRAMAN MOBILE

(Front End – Back End) HAPUS DATA – EDIT DATA

# BICARALAH YANG BAIK ATAU DIAM

Nabi Muhammad Shallallahu 'alaihi wa sallam bersabda:

مَنْ كَانَ يُؤْمِنُ بِاللَّهِ وَالْيَوْمِ الْآخِرِ فَلْيَقُلْ خَيْرًا أَوْ لِيَصْمُتْ

*Barangsiapa beriman kepada Allah dan hari akhir, hendaklah dia mengucapkan sesuatu yang baik atau diam. [HR. Bukhâri, no. 6475; Muslim, no. 47; dari Abu Hurairah Radhiyallahu anhu]*

## Front End (1) *edit hapus data*

- 1 Edit file user.html, tambahkan class “editdata” dan “hapusdata” beserta data-id pada link tombol edit dan hapus ketika tampil data

```
buatTabel="";
buatTabel+="<tr id='row-"+iduser+"'><td>"+nomor+"</td>"+
    "<td>"+iduser+"</td>"+
    "<td>"+namauser+"</td>"+
    "<td>"+leveluser+"</td>"+
    "<td class='actions-cell'><a class='link icon-only editdata' data-id='"+iduser+"'><i class='icon material-icons'>edit</i></a><a
    class='link icon-only hapusdata' data-id='"+iduser+"'><i class='icon material-icons'>delete</i></a></td></tr>";

document.getElementsByTagName("table")[0].innerHTML += buatTabel;
document.getElementById("status").style.display = "none";
```

```
actions-cell'><a class='link icon-only editdata' data-id='"+iduser+"'><i clas
on-only hapusdata' data-id='"+iduser+"'><i class='icon material-icons'>dele
```

- 2 Buat id pada masing-masing row data

```
buatTabel+="<tr id='row-"+iduser+"'><td
    "<td>"+iduser+"</td>"+
    "<td>"+
    "</td>"+
```

## Front End (2) hapus data (1)

1

Tambahkan script berikut didalam script document function ready pada user.html

```
//start hapus data
$("body").on("click", ".hapusdata", function() {
    var iduser = $(this).attr('data-id');
    var dataString = "username=" + iduser + "&hapus=";
    $.ajax({
        type: "POST",
        url: "http://localhost/mobile/hapususer.php",
        data: dataString,
        crossDomain: true,
        cache: false,
        beforeSend: function() {
            document.getElementById("status").style.display = "block";
        },
        success: function(data) {
            if (data == "success") {
                document.getElementById("status").style.display = "none";
                $('#row-'+iduser).fadeOut(800, function() {
                    $('#row-'+iduser).remove();
                });
                var toastCenter = app.toast.create({
                    text: 'Data '+iduser+' sudah dihapus',
                    position: 'center',
                    closeTimeout: 2000,
                });
                toastCenter.open();
            } else if (data == "error") {
                alert("Terjadi error pada backend");
            }
        }
    });
});
//end hapus data
```

## Back End (1) hapus data (2)

1 Buat file hapususer.php pada folder mobile

Pada back end

```
1 <?php
2     include "db.php";
3     if(isset($_POST['hapus'])) {
4         $username=$_POST['username'];
5
6         $hapus= $koneksi->query("DELETE FROM user where id_user='$username'");
7         if($hapus)
8             echo"success";
9         else
10            echo"error";
11     }
12 ?>
```

## Front End (2) edit data (1)

1

Tambahkan script berikut didalam script function document ready pada user.html

```
//start edit data
$("body").on("click", ".editdata", function() {
  var iduser = $(this).attr('data-id');
  var app = new Framework7();
  app.popup.open('.popup_edit', true);
  var dataString = "username=" + iduser + "&edit=";
  $.ajax({
    type: "POST",
    dataType: 'json',
    url: "http://localhost/mobile/edituser.php",
    data: dataString,
    crossDomain: true,
    cache: false,
    success: function(data) {
      var v_iduser=data[0].id_user;
      var v_namauser=data[0].nama_user;
      var v_leveluser=data[0].level_user;
      var v_passworduser=data[0].password_user;
      $("#e_username").val(v_iduser);
      $("#e_nama").val(v_namauser);
      $("#e_password").val(v_passworduser);
      $("#e_leveluser").val(v_leveluser);
    }
  });
});
//end edit data
```

## Back End (2) *edit data (2)*

1 Buat file edituser.php pada folder mobile

Pada back end

```
1 <?php
2     include "db.php";
3     if(isset($_POST['edit'])){
4         $username=$_POST['username'];
5         $stampiluser=mysqli_query($koneksi, "select * from user where id_user='$username'");
6         while($row=mysqli_fetch_object($stampiluser)){
7             $data[]=$row;
8         }
9         echo json_encode($data);
10    }
11 >
```

## Front End (2) *edit data* (3)

### 1 Tambahkan script berikut dibawah table

```
<div class="popup_popup_edit">
<div class="page">
<div class="navbar">
  <div class="navbar-inner">
    <div class="title">EDIT DATA</div>
    <div class="right"><a href="#" class="link_popup-close">Close</a></div>
  </div>
</div>
<div class="page-content">
  <div class="block">
    <div class="list no-hairlines-md">
      <ul>
        <li class="item-content item-input">
          <div class="item-inner">
            <div class="item-title item-label">Id User</div>
            <div class="item-input-wrap">
              <input type="text" disabled id="e_username">
              <span class="input-clear-button"></span>
            </div>
          </div>
        </li>
        <li class="item-content item-input">
          <div class="item-inner">
            <div class="item-title item-label">Nama</div>
            <div class="item-input-wrap">
              <input type="text" id="e_nama">
              <span class="input-clear-button"></span>
            </div>
          </div>
        </li>
        <li class="item-content item-input">
          <div class="item-inner">
            <div class="item-title item-label"> Password</div>
            <div class="item-input-wrap">
              <input type="password" id="e_password">
              <span class="input-clear-button"></span>
            </div>
          </div>
        </li>
      </ul>
    </div>
  </div>
</div>
<div class="col button button-fill" value="UPDATE">
</div>
</div>
</div>
```

```
<li class="item-content item-input">
  <div class="item-inner">
    <div class="item-title item-label"> Password</div>
    <div class="item-input-wrap">
      <input type="password" id="e_password">
      <span class="input-clear-button"></span>
    </div>
  </div>
</li>
<li class="item-content item-input">
  <div class="item-inner">
    <div class="item-title item-label">Level User</div>
    <div class="item-input-wrap">
      <select id="e_leveluser">
        <option value="Admin">Admin</option>
        <option value="User">User</option>
      </select>
    </div>
  </div>
</li>
</ul>
<input type="submit" id="editdatafinal" class="col button button-fill" value="UPDATE">
</div>
</div>
</div>
```

## Front End (2) *edit data (4)*

### 1 Tambahkan script berikut didalam script function document ready pada user.html

```
//start edit data final
$("body").on("click", "#editdatafinal", function() {
    var v_username = $("#e_username").val();
    var v_nama = $("#e_nama").val();
    var v_password = $("#e_password").val();
    var v_level = $("#e_leveluser").val();
    var dataString = "username=" + v_username + "&nama=" + v_nama + "&password=" + v_password + "&leveluser=" + v_level + "&updatefinal=";
    $.ajax({
        type: "POST",
        url: "http://localhost/mobile/edituserfinal.php",
        data: dataString,
        crossDomain: true,
        cache: false,
        success: function(data) {
            if (data == "success") {
                $("#row-"+v_username+" td:nth-child(3)").text(v_nama);
                $("#row-"+v_username+" td:nth-child(4)").text(v_level);
                app.popup.close('.popup_edit', true);
                var toastCenter = app.toast.create({
                    text: 'Data '+v_username+' sudah diupdate',
                    position: 'center',
                    closeTimeout: 2000,
                });
                toastCenter.open();
            } else if (data == "error") {
                alert("Terjadi error pada backend");
            }
        }
    });
});
//end edit data final
```

## Back End (2) *edit data (5)*

1 Buat file edituserfinal.php pada folder mobile

Pada back end

```
1 <?php
2     include "db.php";
3     if(isset($_POST['updatefinal'])) {
4         $username=$_POST['username'];
5         $nama=$_POST['nama'];
6         $password=$_POST['password'];
7         $leveluser=$_POST['leveluser'];
8
9         $updatefinal= $koneksi->query("UPDATE user SET
10        nama_user='$nama',password_user='$password',level_user='$leveluser'
11        WHERE id_user='$username'");
12        if($updatefinal)
13            echo "success";
14        else
15            echo "error";
16    }
17 ?>
```

catatan

Ketika kita baru menambah data, data belum langsung bisa diedit ataupun dihapus

## TUGAS

1 Buat agar data yang baru ditambah bisa langsung diedit ataupun dihapus

2 Buat agar form tambah hanya akan muncul jika tombol tambah di klik, dan form tambah akan menutup (close) kembali setelah data berhasil tersimpan dan muncul pada tabel

No	User	Nama	Level
1	ali	Ali Fath	Admin
2	Andi	Andi SA	User
3	qwrwr	r	User

Masukkan Id User

Masukkan Nama

Masukkan Password

Level User  
Admin

TAMBAH
